

EQUIPMENT SHARE

Rental Facilities for Heavy Equipment

PROJECT SUMMARY

Parkway was engaged by EquipmentShare, a nationwide equipment and digital solutions company serving the construction industry, to construct specialized rental facilities for heavy equipment in Texas. Our first project with EquipmentShare in Angleton involved the ground-up construction of an 11,177 square-foot pre-engineered metal building (PEMB) with comprehensive site development. This facility features specialized areas for equipment maintenance and storage, tailored to meet the operational needs of EquipmentShare.

Building on the success of the Angleton project, Parkway is currently constructing a similar facility in Huntsville, Texas, covering 9,436 square feet. Additionally, Parkway's familiarity with EquipmentShare's processes has allowed us to develop efficiencies and become experts in constructing their facilities. This expertise is helping EquipmentShare to expand their nationwide footprint, with six more facilities in five states currently in preconstruction.
