## VIRGIN GALACTIC

### DESIGN BUILD DELTA CLASS SPACESHIP CAMPUS

#### PROJECT SUMMARY

Parkway was retained by Virgin Galactic to complete three design-build projects in Arizona and California. These projects include their 4-story headquarters in Orange County, CA, a Delta Class Spaceship Campus at the Mesa Gateway Airport, and an integration testing facility in Irvine, CA.

The Delta Class spaceship campus spans the length of over two football fields and houses four assembly bays. This hangar facility is designed to produce up to six next-generation Delta spaceships per year at full capacity. The southern California facilities underwent extensive tenant improvements, design enhancements, and security upgrades to meet the specialized needs of the aerospace industry.

#### PROJECT DETAILS

**Client**  
Virgin Galactic

**Size**  
152,000 SF total

**Services**  
Design Build; CM/GC

**Type**  
Remodel, Finishout

#### FEATURES

- Arizona & California
- 2 Spaceship Hangars
- HQ Offices
- Specialized Security
